Amendments to the Claims:

This listing of claims will replace all prior versions, and listings, of claims in the application:

Listing of Claims:

1. (Currently Amended) A method for scheduling an event over a network in a calendar of an invitee, the event having a set of details including at least a predetermined time for the event provided by an event creator, the method comprising:

as the result of action by the invitee on a web page published by the event creator for the event, receiving a schedule request at a server in communication with the network, the schedule request including at least ~~a predetermined~~ the predetermined time for the event and an identifier for the event creator, wherein the server has access to the calendar of the invitee and a calendar for the event creator;

creating an event record at the server, the event record including at least the predetermined time for the event and a link to the calendar of the invitee; and

adding the event to the invitee's calendar.

2. (Original) A method according to claim 1, further including:

creating a link from the event record to the event creator's calendar; and

adding the event to the event creator's calendar.

3. (Original) A method according to claim 1, wherein the network is the Internet.

4. (Original) A method according to claim 2, wherein the invitee's calendar, the event creator's calendar and the event record are stored in a database in communication with the server.

5. (Original) A method according to claim 1, wherein the schedule request is a hypertext transfer protocol request.

6. (Original) A method according to claim 1, wherein the invitee's calendar is part of a personal information management system.

7. (Original) A method according to claim 1, wherein the event creator changes at least one member of the set of details for the event, the method further including:

updating the event record with the changed set of details; and

updating the event in the invitee's calendar with the changed set of details using the link between the event record and the invitee's calendar.

8. (Original) A method according to claim 7, further including sending a notification message to the invitee including the changed set of details.

9. (Previously Presented) A method according to claim 1, wherein the action results from invoking a link by the invitee, the link associated with the event on the web page of the event creator.

10. (Previously Presented) A system for scheduling an event over a network in a calendar of an invitee, the event having a set of details provided by an event creator including at least a predetermined time for the event, the system comprising:

a first link, inserted in a web page associated with the event creator and including the event, that when selected by the invitee creates a schedule request including at least the predetermined time for the event and an identifier for the event creator, the schedule request directing the event to the invitee's calendar;

at least one server, in communication with the network, to receive the schedule request and store the event in the invitee's calendar and in an event record that includes a second link to the invitee's calendar; and

at least one database, in communication with the server, to store the event record.

11. (Original) A system according to claim 10, wherein the schedule request is a hypertext transfer protocol request.

12. (Original) A system according to claim 10, wherein the event is stored in a calendar for the event creator.

13. (Original) A system according to claim 10, wherein the content site is a Web page on the World Wide Web.

14. (Previously Presented) A computer program product for scheduling an event over a network in a calendar of an invitee, the event having a set of details provided by an event creator including at least a predetermined time for the event, the computer program product comprising a tangible storage medium having computer readable code thereon, the computer readable program code including:

program code for receiving a schedule request, the schedule request including at least the predetermined time for the event and an identifier for the event creator, as the result of action by the invitee on a web page published by the event creator for the event at a server in communication with the network, wherein the server has access to the calendar of the invitee and a calendar for the event creator;

program code for creating an event record at the server, the event record including at least the predetermined time for the event and a link to the calendar of the invitee; and

program code for adding the event to the invitee's calendar.

15. (Original) A computer program product according to claim 14, wherein the schedule request is a hypertext transfer protocol request.

16. (Original) A computer program product according to claim 14, further

including:

program code for creating a link from the event record to the event creator's calendar; and

program code for adding the event to the event creator's calendar.

17. (Previously Presented) A computer program product according to claim 14, wherein the event creator changes at least one member of the set of details, the computer program product further including:

program code for updating the event record with the changed set of details; and

program code for updating the event in the invitee's calendar with the changed set of details using the link between the event record and the invitee's calendar.

18. (Original) A computer program product according to claim 17, further including program code for sending a notification message to the invitee including the changed set of details.

19. (New) A method according to claim 1, further comprising:

wherein action by the invitee on a web page comprises clicking on a link on a web page; and

wherein the web page is published on the Internet; and

wherein the action by the invitee on the web page is not preceded by the receipt by the invitee of an invitation or other notice, other than the web page, about the event or the predetermined time for the event.
